Reflective Entry (Weekly activities)	Signature and remarks of faculty
This week we reviewed the FYDP-I Handbook's CEP/CEA attributes and mapped our topic "**Benchmarking Large Language Models for Bangladeshi Statutory Law: A Study on Accuracy and Hallucination in Bangla**" against them. **1. Mapping with P1–P7 and A1–A5:** **Complex Engineering Problem:** • **P1 (Depth of Knowledge):** Requires NLP, LLMs, and Bangla legal text analysis. • **P4 (Familiarity of Issues):** No standardized native Bangla MCQ benchmark exists for this domain. • **P6 (Stakeholder Involvement):** Balances demand for automated legal info against the risk of AI hallucinations misleading citizens. **Complex Engineering Activity:** • **A1 (Range of Resources)**: Uses PDF/OCR parsers, validation frameworks, and multiple LLM APIs. • **A2 (Level of Interaction):** Involves interacting challenges in extraction, correction, and evaluation. • **A3 (Innovation):** Introduces a novel dataset pipeline and hallucination evaluation framework. **2. Problem Classification:** A Complex Engineering Problem,combining Bangla NLP, dataset construction, and LLM evaluation with no standard procedure. **3. Data, Tools, and Equipment:** Uses the Road Transport Act, 2018 and 299 expert-reviewed MCQs, with Python, Pandas, PyMuPDF, and Tesseract OCR, alongside Llama/Qwen and GPT-4o/Gemini APIs.
