Reflective Entry (Weekly activities)	Signature and remarks of faculty
• Attended a meeting with teammates to discuss the project's progress and direction. • Continue refining the study protocol based on RA's feedback. • Since our project's topic changed slightly, we remapped our FYDP project in line with the BAETE Complex Engineering Problem (P1–P7) and Complex Engineering Activities (A1–A5) criteria. • Additionally, I read a paper in a related domain titled "**Exploring the Barriers to Feminine Healthcare Access among Marginalized Women in Bangladesh and Facilitating Access through a Voice Bot,**" published in Heliyon (**2024**). **Key Findings:** • **Health inequity:** 75% of marginalized women never had a proactive checkup; 86.7% are unaware of PMS. • **Barriers:** High discomfort discussing menstrual health, plus traditional restrictions on access. • **Tech acceptance:** 90% of marginalized women are willing to use a voice bot, vs. 67.43% of privileged women. Button phones remain the practical platform. • **Voice bot results:** Achieved 76% accuracy in Bangla; privacy eased hesitation on sensitive topics.
