Reflective Entry (Weekly activities)	Signature and remarks of faculty
• Refined and polished the presentation slides for improved clarity and visual flow. • Revised and strengthened Chapter 2 of the draft paper based on recent findings and feedback. • Read the paper titled "**A visual search engine for Bangladeshi laws**(2017)**".** • Key Findings ▪ Digitized Bangladeshi laws were hard to search, so a visual search engine was built with citation maps and entity extraction. ▪ Used Doc2Vec + MDS for topical clustering, N-gram keyword search, Stanford NER for entities, and citation-link mining. ▪ Limitations: no Bangla NER (only ~800 English articles processed), incomplete archives, inconsistent scraping, small 15-person pilot. ▪ No formal IR metrics reported (Precision, Recall, MAP, MRR), no comparison against baselines, corpus stayed static, and Bangla entity extraction remained a bottleneck.
